

LUBRAL COMPOUND EP ISO VG 150

EXTREME PRESSURE LUBRICANT FOR INDUSTRIAL GEARS

DESCRIPTION

Extreme pressure lubricant of optimal quality to be used in a wide variety of industrial gears, both in simple bearings and in antifriction bearings that are part of closed transmissions operating under severe service conditions. They contain additives that impart antifriction and extreme pressure (EP) characteristics, high oxidation stability, corrosion protection, resistance to foaming and emulsion with water.

They have friction modifier characteristics that reduce power consumption and lower oil temperatures.

BENEFITS

- High capacity to bear loads.
- Low maintenance costs
- High thermal and oxidation stability that inhibits the formation of sludge and deposits even at high oil operating temperatures.
- Anti-friction characteristics that reduce friction losses, therefore the wear of lubricated components.
- High viscosity index that gives optimal performance in a wide temperature range.

- Antifoam characteristics that control foaming.
- Demulsifying characteristics that allow the rapid separation of water and oil in a short time.
- Protection against rust and corrosion.
- High adhesiveness even in the presence of water.

APPLICATIONS

Formulated to be applied in all types of closed gear transmissions with circulating or splash lubrication systems and in speed reducers with spur, bevel and helical gears, conveyor belt speed reducers, rolling mills, screens.

Industrial gears for converters, agitators, dryers, fans, presses, pumps, screens and other heavy duty applications.

Marine gears including propulsion machinery, centrifugal like pumps, elevators, winches, torsion gears. Non-geared applications including couplings, bolts and flat contact bearings and highly loaded bearings operating at low speeds, in short, for Industrial gearboxes and reducers requiring U.S. Steel 224 and AGMA 250.04.

LUBRAL COMPOUND EP ISO VG 150

EXTREME PRESSURE LUBRICANT FOR INDUSTRIAL GEARS

CHARACTERISTICS

TESTS	TEST METHOD	TYPICAL VALUE
ISO Grade		150
Color	ASTM D1500	3.0
Appearance	Visual	Brilliant
Kineamtic Viscosity @ 40 °C, cSt	ASTM D445	150
Kinematic Viscosity @100 °C, cSt	ASTM D445	14.9
Viscosity Index	ASTM D2270	98
Flash Point COC °C	ASTM D92	230
Resistance to rust formation	ASTM D665	Pass
Foaming Tendency / Stability ml, max	ASTM D892	
Sequence I		20 / 0
Sequence II		50 / 0
Sequence III		20 / 0
Copper Corrosion		1b

Typical Properties are those obtained with normal production tolerance and do not constitute a specification. Variations that do not affect product performance are expected during normal manufacturing and at different mixing locations.
